

Flying Creatures

An Immersive Science class based off the Fifth Day of Creation

Hello and welcome! This curriculum follows a Charlotte Mason approach of putting beautiful things in front of your child and watching them grow. This method gives an in-depth, above-their-perceived-grade-level exploration into a specific part of zoology. Is it ok to spend an entire year on just a part of zoology? YES! A child who has focused on one subject throughout an entire year is being challenged in ways that will develop his/her critical thinking, helps them retain complex information, and assists them making more intelligent inferences about how God's scientific world works. I am excited to explore God's orderly, beautiful design of the world with you!

We will cover the entire book during the year. Most lessons will be divided into two weeks. Students will have readings and assignments due for each class period and are expected to come to class prepared and ready to participate.

I will have a detailed of those lessons once my book arrives.
